

Don't fall hook, line, and sinker.

A successful phishing attack only requires one person to take the bait. A single click can allow an intruder into your network. When checking emails, remain cautious and treat links and attachments with suspicion.

Hold the door!

Security threats don't originate exclusively from cyberthreat actors.
Be sure office doors close behind you to prevent physical intruders.
If you're holding the door for someone, verify their identity.

Cream? Sugar? Network intrusion?

Free public Wi-Fi? Unsecure networks come with serious security risks. Always enable your VPN capabilities and exercise caution when accessing sensitive information in public.

Only you can prevent cyber breaches!

As the first line of defense, staying current with security fundamentals is your responsibility. Complete mandatory security awareness training and always follow best practices.

PASSWORDS ARE LIKE DIAMONDS

Keep them secured in a safe place.

Use a password vault/manager that supports multi-factor authentication.

PASSWORDS ARE LIKE SNOWFLAKES

They should be unique.

Don't use the same password for both work and personal accounts.

PASSWORDS ARE LIKE SOCKS

They should be changed often.

If you think your password has been compromised, change it immediately!

PASSWORDS ARE LIKE WEEKENDS

The longer the better.

Make passwords complex so they're not easily guessed.

PASSWORDS ARE LIKE GERMS

Don't share them with your friends.

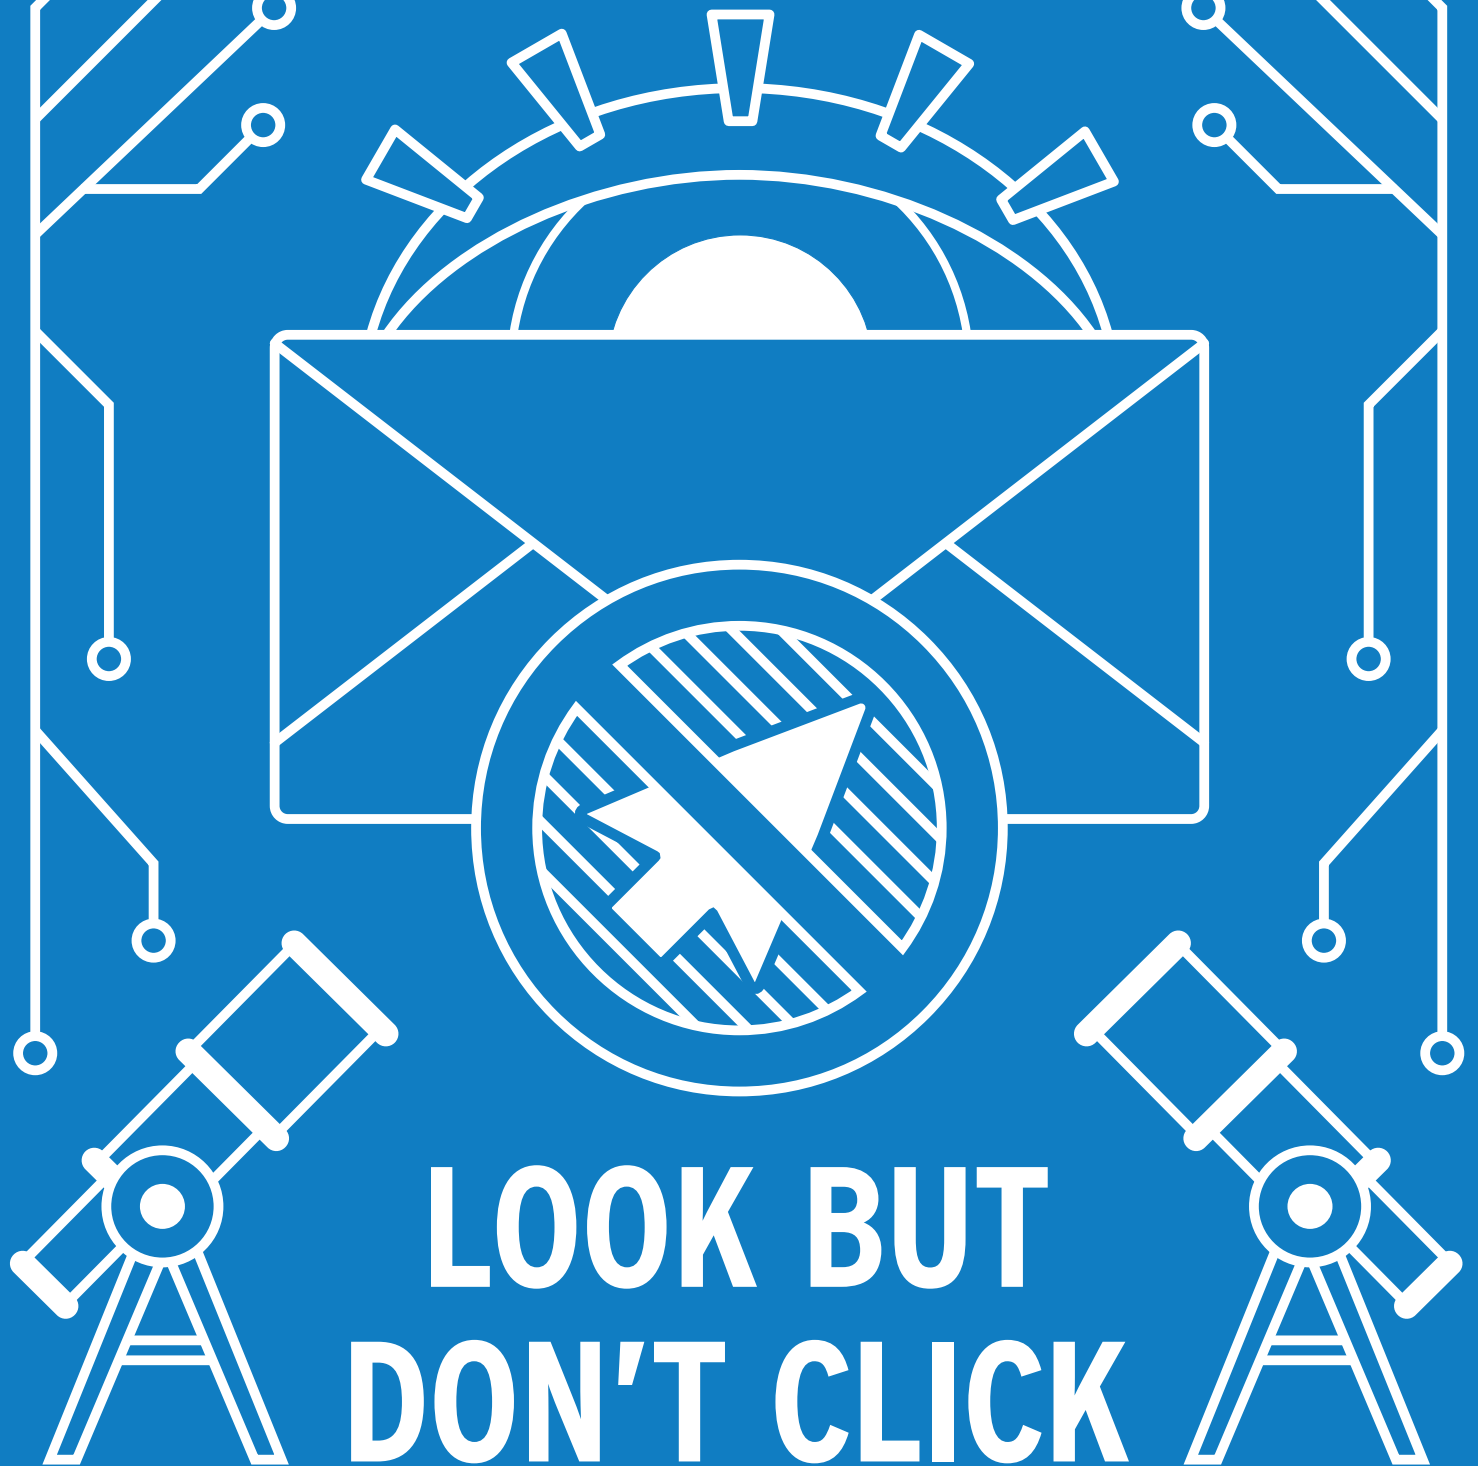

Don't spread your passwords around. Keep them to yourself.

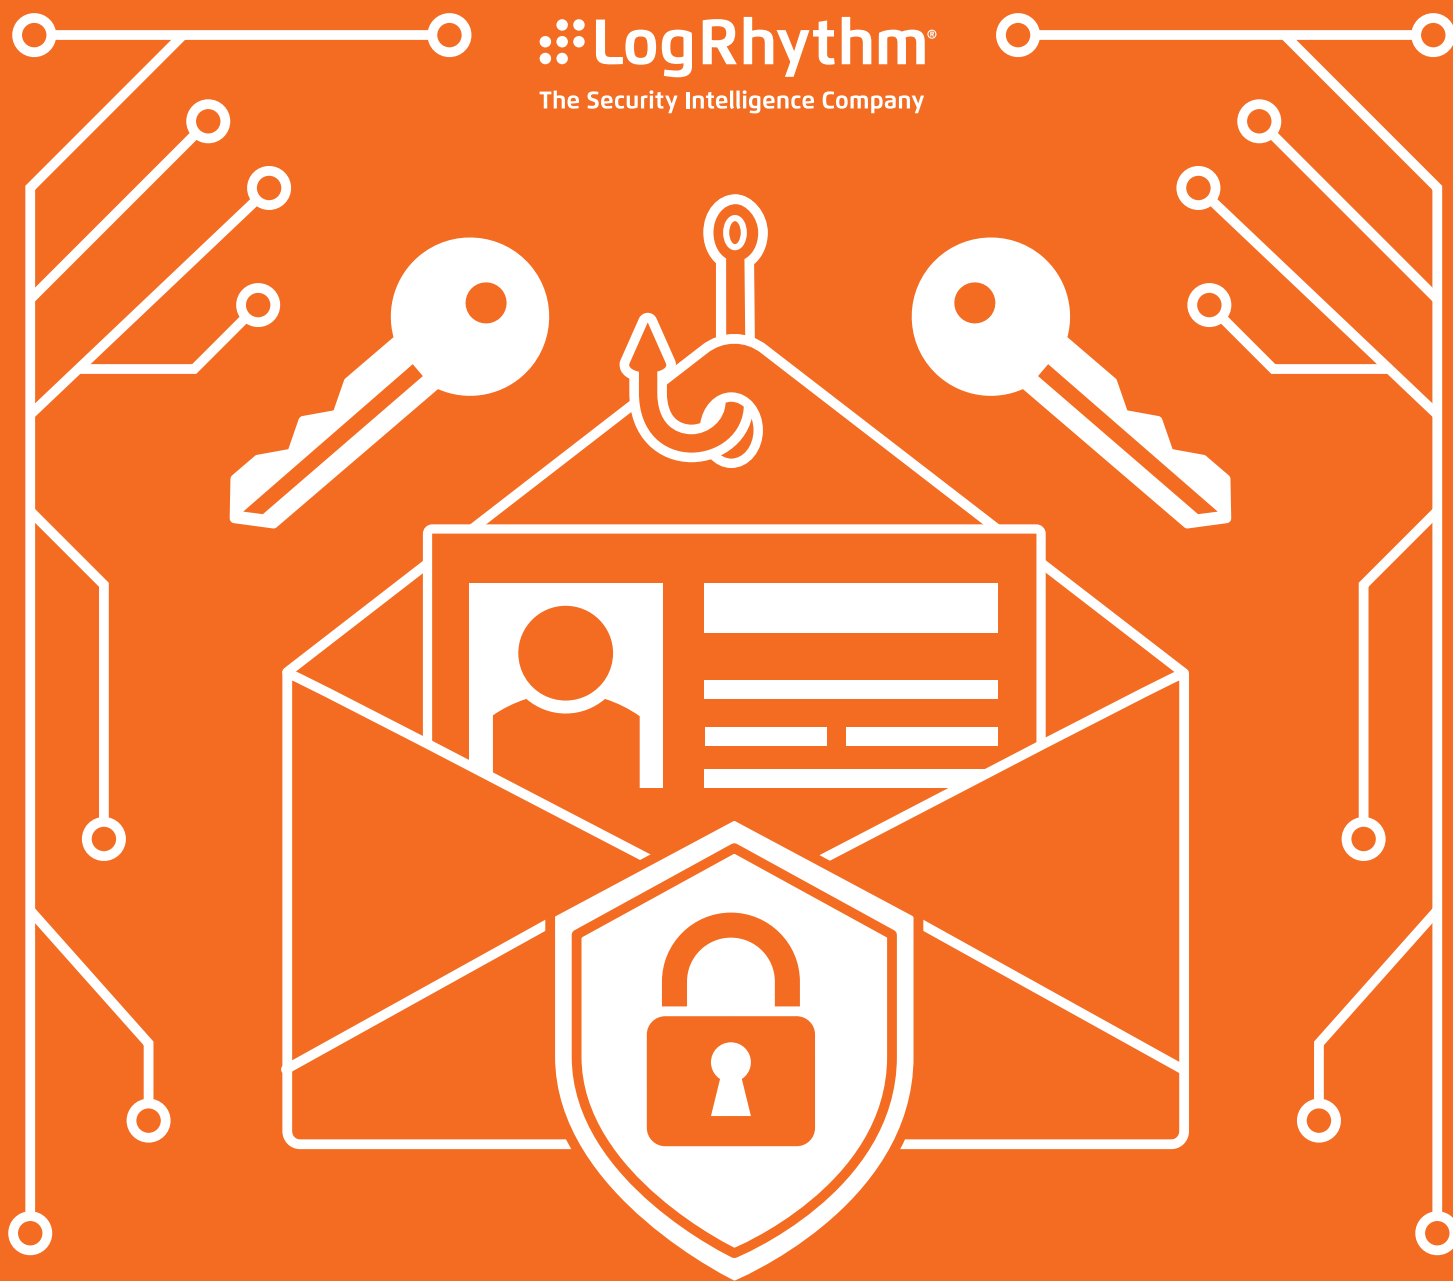

DON'T TRUST THE DISPLAY NAME

Just because it says it's from a known entity doesn't mean it is. Check the email address to confirm.

LOOK BUT DON'T CLICK

Hover over images and links – if the alt text that appears doesn't match, it's probably phishing.

QUESTION REQUESTS FOR PERSONAL DATA

Legitimate companies are unlikely to ask
for personal information in an email.

CHECK FOR SPELLING ERRORS

Spelling or grammatical mistakes in a message
can be indicators of a malicious email.
